

Subject: Environmentally Preferable Rodent Bait Stations

To whom it may concern,

VM Products® and its raw material suppliers certify the following points have been made to create an environmentally preferable product. In an effort to accommodate current green standards, VM Products® has worked aggressively to make our product line as environmentally friendly as possible.

- All VM Products® stations are made out of 100% recycled plastic.
- The EZ-SECURED® concrete block is made of Type I/II green cement that meet LEEDS specifications.
- The green cement meets the 1.7 pounds of NOx per ton of clinker standard and has one of the lowest NOx emissions per ton of clinker in the U.S.
- For every 2,000 EZ-KLEAN® stations produced, we save 6 barrels of oil
- All box materials for VM Products® meet the corrugated industry standard of up to 40% recycled ECT post-consumer fiber with water soluble printing ink.
- All black EZ-KLEAN® and EZ-SECURED® use 100% used recycled pallets.

Please contact VM Products® with any questions.

A handwritten signature in black ink that reads 'Ethan Vickery'.
