

MAGNAFLY™

TREATMENT STATION

Vents keep water out while providing flies a landing zone to enter the station.

Durable hinge design made to last.

Two zip tie points make it easy to secure to posts or poles.

Uses the VM Universal Key®, shared across the product family.

Compatible with the VM universal stake for in-soil placement and includes mounting foam for concrete walls.

Multiple vents in the bottom and sides increase airflow through the station.

Apply fly bait here per the label's directions for use.

Active Treatment Carpet™

The patent-pending Active Treatment Carpet creates a consistent treatment zone* in a locked station, allowing flies to pick up the bait treatment as they move across it.

*Application treatment sold separately. Always read and follow label directions.

Optical Enhancement Skylight™

The Skylight sits atop the MagnaFly Treatment Station. Its domed design disperses light evenly throughout the station to improve visibility and performance.
